Scalability & Future Plan

Part 8 – Project Demonstration | Individual Project

Project: EV Market Performance & Insights

Project Type: Individual Project

Prepared by: Joha Khan

Date: 31 October 2026

Scalability & Future Plan

The current solution is a Tableau Public dashboard built from a supplied dataset. The following limitations and upgrades are proposed future improvements; they are not claimed as features already implemented.

Current System Limitations

S.No	Limitation	Impact	Priority to Address
1	The dashboard analyses the dataset available at project time; it does not automatically collect live EV market data.	Insights may become outdated when new market data is released.	High
2	The current analysis is limited to the fields and categories included in the supplied dataset.	Some useful business questions may not be answerable without additional fields.	Medium
3	The workbook is published on Tableau Public.	Publicly shared workbooks and data should not contain confidential or personal information.	High

Scalability Plan

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	A Tableau Public dashboard intended for viewing and project demonstration.	For wider organisational use, deploy through an appropriately licensed Tableau environment and test concurrent access.
2	Data Storage	A supplied file-based dataset is used as the analysis source.	For larger datasets, move data to a managed database or cloud data warehouse and define a repeatable refresh process.
3	Performance	The current workbook contains a finite set of worksheets and dashboard views.	Optimise calculations, reduce unnecessary marks, use extracts where suitable and test load time with larger datasets.
4	Security	The workbook is shared through Tableau Public.	Use only non-confidential data in public workbooks; use access-controlled hosting and role-based permissions for private or sensitive data.

Future Roadmap

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Validate data definitions and add clear source / refresh notes.	Short term	Improve transparency and interpretation.
Phase 2	Add more recent records and additional EV market attributes, when reliable data is available.	Medium term	Broaden the analysis and improve coverage.
Phase 3	Connect to a managed database and establish scheduled data refresh.	Long term	Reduce manual updates and support larger datasets.
Phase 4	Add more advanced comparisons, drill-downs and access-controlled deployment if needed.	Long term	Improve exploration and support organisational use.

Note: Timelines are indicative future proposals, not committed delivery dates.
